Tutorial – How to BMW super-tools Virtual Machine

A. Download and Install VirtualBox

1. Go to [VirtualBox Downloads](#) and click on “Windows hosts” to download VirtualBox for Windows or click on “OSX hosts” to download VirtualBox for MAC OSX;
2. Also download “**VirtualBox Extension Pack**” in both above cases (Windows and MAC);
3. Start the installer. Next, next, next. No complicated stuff, just an install.

B. Unpack the VM archive

1. If you don't have 7zip installed, install 7zip ([download here](#));
2. Go to the folder where you downloaded “WIN10-BMW.7z” right click on it > 7-Zip > Extract to “WIN10-BMW” (**make sure you have 70.1GB free!**);

C. Load & Start the VM image in VirtualBox

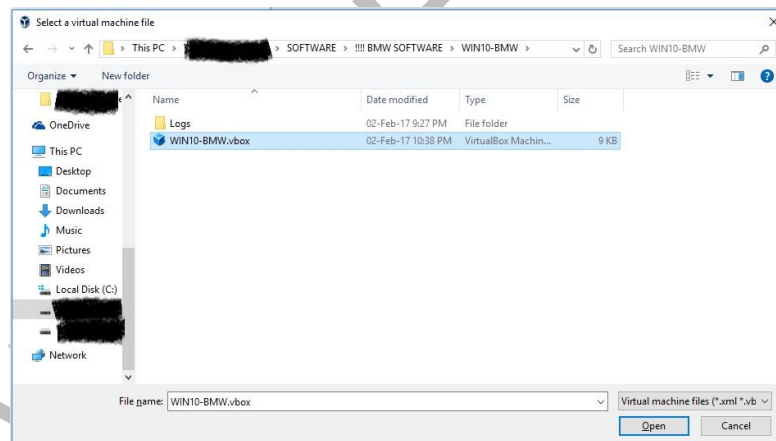

1. Open VirtualBox;

2. Press CTRL A;

3. Go to the folder where you unpacked "WIN10-BMW.7z" archive, select "WIN10-BMW.vbox", click open;

D. Network configuration

1. In order to successfully connect to your car, before starting the virtual machine, be sure to check this:

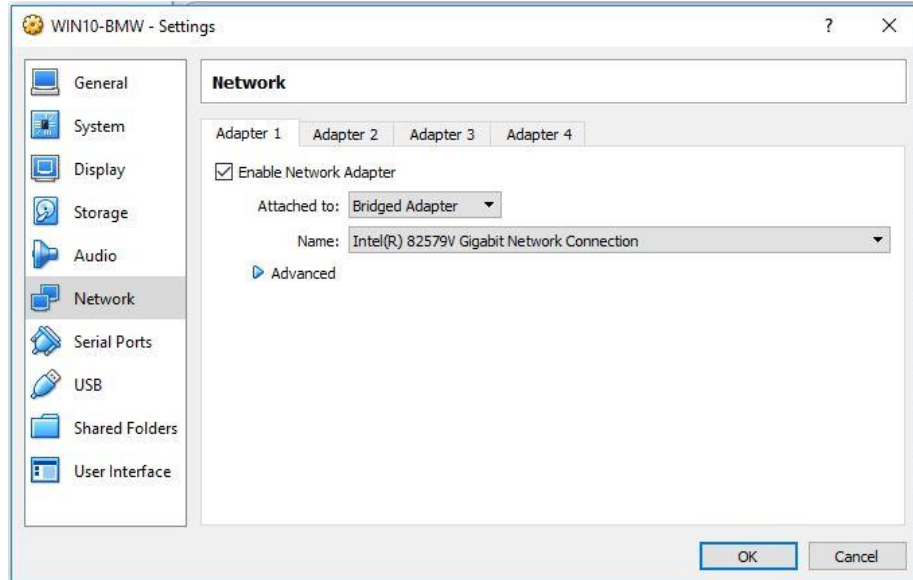

1. Click CTRL S to start the Settings screen;

2. Go to Network tab;

3. Be sure below settings are correct.

Attached to: BRIDGED ADAPTER is selected;

Name: Select Ethernet Adapter that your laptop/desktop has.

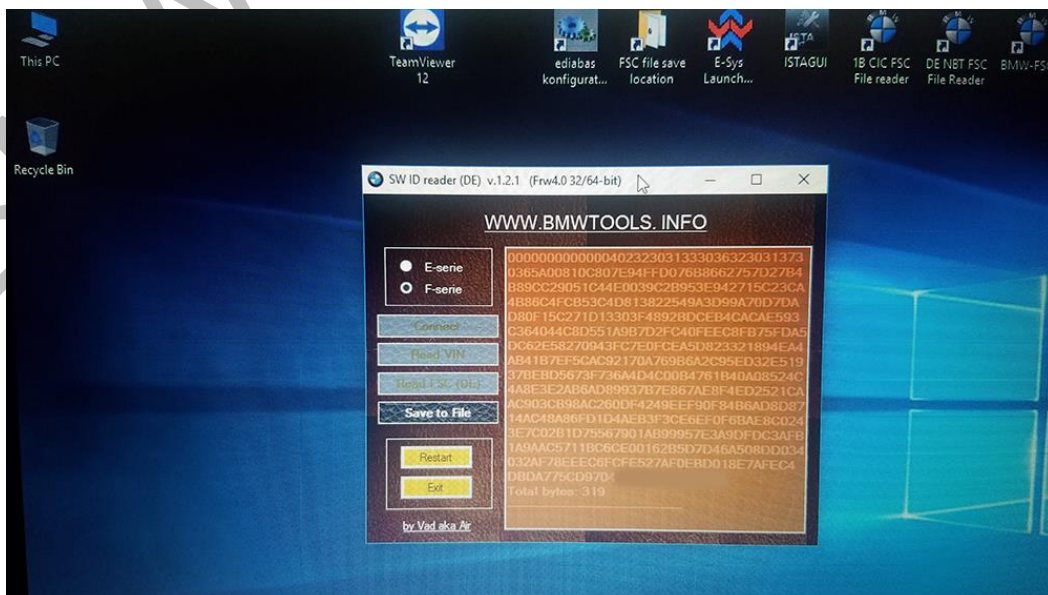

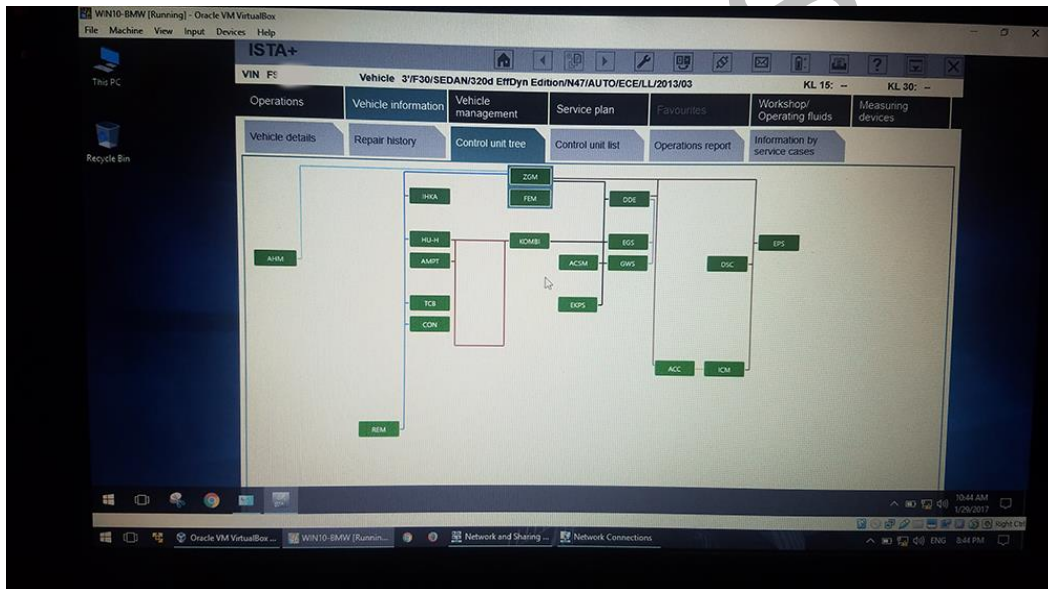

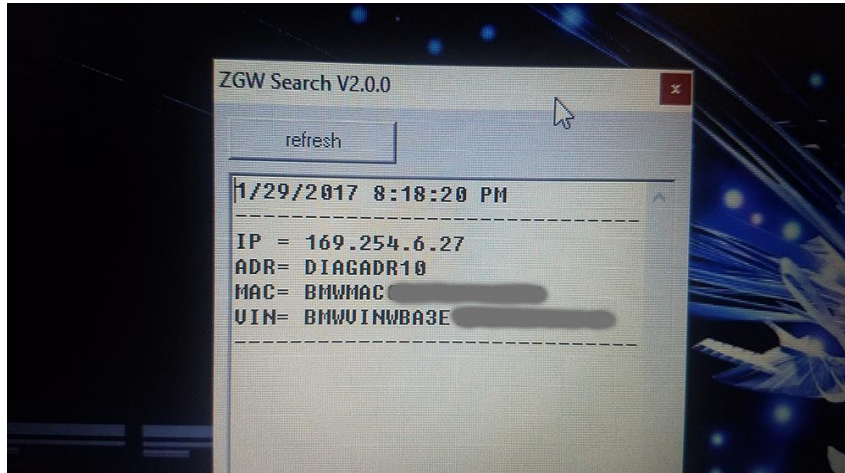

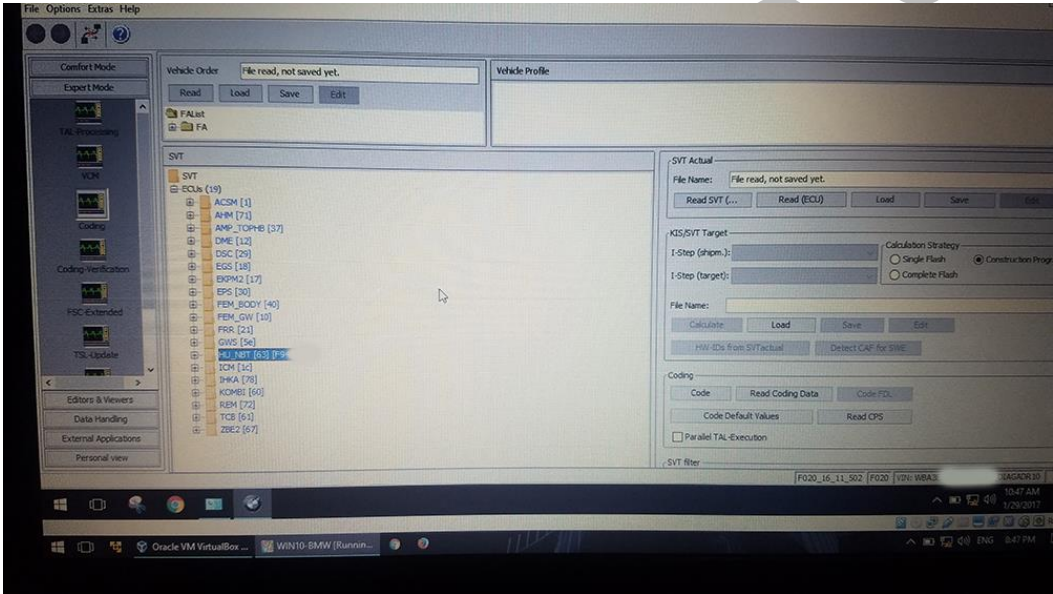

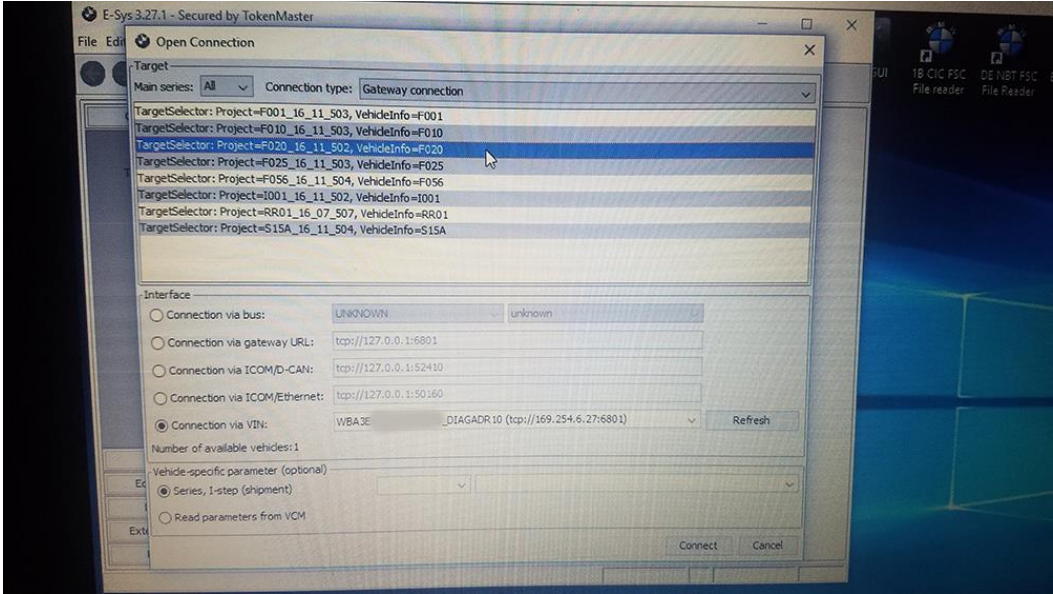

4. Click OK.

5. Start the VM, login as BMW-guest. Use the password received by PM. Done.

E. 100% working! Proof 😊
